(https://docs.opencv.org/4.4.0/db/d27/tutorial_py_table_of_contents_feature2d.html)

2. Feature detectors (ORB & FAST): <https://medium.com/data-breach/introduction-to-orb-oriented-fast-and-rotated-brief-4220e8ec40cf> (<https://medium.com/data-breach/introduction-to-orb-oriented-fast-and-rotated-brief-4220e8ec40cf>)

- After you go through the tutorials, you should be able to work on this assignment.

- Please answer the following questions and work directly on this jupyter notebook.

- Make sure the code can be run and show the result and figures properly.

- Please write down your observation with markdown in this notebook briefly.

1. Feature detector (40%)

Please use the following feature detectors (FAST, ORB, SIFT) and draw the feature points on the test1.jpg images.

(Example figure)

In []:

2. Feature matching (60%)

Please match the feature points from the test1.jpg and test2.jpg. Also, please apply Lowe's ratio test (with ratio 0.6 and 0.8) to match the features and observe the differences when adjusting the ratio.

2.1 Please use SIFT as feature detector and descriptor.(30%)

(Example figure)

In []:

2.2 Please use ORB as feature detector and descriptor.(30%)
